The Little Hercules

Our mission is to service our customers during the sale and throughout the life of the product. This is why we offer a 3-year / 10-year warranty on all sprayers we sell.

Why use an air-blast mist sprayer?

Mist sprayers offer a great solution to get a complete coverage in the most difficult applications. The air-blast mist sprayer generates a high velocity air stream turbulently mixing a fine chemical mist with air. Conventional sprayers use a chemical and water solution. Our products produce a chemical/water and air mixture which is more cost effective because the tank doesn't need to be filled as frequently.

Flexible:

This unit will fit into almost all utility vehicles. This means you will have the flexibility to maneuver in and around tight obstacles. It's light enough that it can easily be moved from one vehicle to another.

Powerful:

The Little Hercules is small but don't let its size fool you - it is very powerful. It is equipped with a 9 HP Honda engine which produces a powerful air blast.

Save Money:

Mist sprayer advantages

- Universities and extension experts report 50% or more savings in the use of chemicals.
- Less water to haul means 50-60% less fuel to consume
- Air mixtures require 60-90% less labor than some water solutions
- Lower initial cost, less maintenance and easy to operate.
- Higher profits due to lower costs
- Inexpensive piece of equipment
- 10-year frame / 3-year parts warranty

Drive Type: 9 HP Honda engine

Air Flow: 3200 cfm

Fan Speed: ~2100 rpm

Outlet Area: 23 in²

Blower Direction: 180 degree direction, deflector

Control: plate moved with pull cable

Sprayer Direction: Spring pin plate. 275 degrees

Control: of total rotation with stops every 15 degrees

Fan Type: 12" galvanized centrifugal blower housing with fan

Blower Housing: Heavy-duty galvanized steel construction

Dry Weight: 270 lbs

Frame Construction: Welded high-strength steel with powder coat paint finish
